[License: Freeware| Requires: Win All | Size: 8.9 Mb]Q: How to open a form through a button in VB.NET I have a form and a button, through which I want to open that form. I have a another form, My form name is "add_program_form" and button name is "Add button". Now, how to open this form through button? A: First of all, you should post a screenshot of your project, because it's impossible to guess your problem from your question. But if you're asking if you can open form from other, then the answer is yes you can, but you must make your first form (where you want to open that second form) to public, and then use something like this: Me.Close() That means that when you want to open second form, this will be triggered by clicking 82157476af
