If you are interested in learning more about the top electric car facts, you can get all your information at our website. We have interesting electric car facts to share with you. Q: MongoDB: SQL server on Azure account I created an mongodb instance on azure. I am going to use a SQL server on the same account. How can I configure both of them? I can't use external IP address to connect to the DB. How can I set it up? A: One would typically set up a firewall or NAT network device that is in the DMZ of the Azure account. Your SQL Server should then have an external IP that connects to this device. From the SQL Server you can then either connect to the Azure instance on a non public IP, or you can have it connect to the instance on the public IP. You would have to verify that this configuration is acceptable in your environment. 82157476af
